Ron,

The samples would be spread out over two weeks and that is the only sampling anticipated at this time. I realize O&G has a short HT so that would be the priority. The anions, as I recall, have normal TAT for reporting so unless you have a lot of other samples this should be okay. Right?

These samples are really high in priority. Your support with this would really be appreciated!

We will have a meeting tomorrow to discuss the specifics. One item we talked about was to run Ortho Phos as a screen. If you want more information before tomorrow check with John C. since he was involved in those discussions.

Cindy
